Sai Kiran Ramayanam

+91 8639232315 | saikiranramayanam@gmail.com | GitHub | LinkedIn

Professional Summary

Data Science undergraduate with hands-on experience in Machine Learning, Generative AI, and predictive analytics. Developed end-to-end AI solutions including healthcare risk prediction, multimodal RAG systems, and recommendation engines using Python and Scikit-Learn. Passionate about building data-driven applications and deploying practical AI solutions to solve real-world problems.

Education

Aditya Engineering College — Surampalem, AP
Bachelor of Technology in Data Science — CGPA: 8.57/10 — *Aug 2023 – May 2027*

Experience

Machine Learning Intern — *May 2025 – Jun 2025*
1stopai - Remote

- Developed a Human Action Detection system using machine learning techniques and sensor-based datasets.
- Performed data preprocessing, feature extraction, model training, and model evaluation.
- Analyzed classification performance and improved prediction accuracy through experimentation.
- Collaborated on end-to-end machine learning workflows including preprocessing, feature engineering, training, and evaluation.

Projects

Multimodal RAG System for Document and Image Analysis GitHub

- Built a Retrieval-Augmented Generation (RAG) system capable of processing both textual documents and images.
- Implemented multimodal retrieval pipelines to enhance contextual information retrieval and question answering.
- Leveraged vector search and retrieval techniques to improve response relevance and information extraction.

Hospital Readmission Risk Predictor GitHub

- Developed a machine learning system to predict patient readmission risk using healthcare datasets and predictive analytics techniques.
- Performed data preprocessing, feature engineering, and model training using Scikit-Learn classification algorithms.
- Integrated SHAP explainability to interpret model predictions and identify the most influential clinical risk factors.

Movie Recommendation Engine GitHub

- Developed a personalized movie recommendation system using collaborative filtering and recommendation algorithms.
- Implemented recommendation models using Surprise and Scikit-Learn libraries and evaluated prediction performance.
- Generated tailored movie suggestions based on user preferences and historical rating patterns.

Technical Skills

Languages: Python, SQL
Machine Learning: Scikit-Learn, TensorFlow, Feature Engineering, Model Evaluation
Data Analysis: Pandas, NumPy, Matplotlib, Seaborn
Deployment Tools: FastAPI, Docker, Git, GitHub, VS Code
Visualization: Power BI, Excel
AI/LLM: NLP, RAG Systems, LLM Evaluation, Recommendation Systems

Certifications

- Oracle Data Platform 2025 Certified Foundations Associate
- NVIDIA Fundamentals of Deep Learning
- Cisco Data Science Essentials with Python
- Cisco Data Analytics Essentials
- Cisco Python Essentials 1
